

AVIATION

Ulteig's aviation tradition dates to 1970, with a project that pioneered the application of slipform technology for concrete runway overlays. That same year, we were instrumental in obtaining the first Airport Development Grant awarded in the United States. Today, we provide total aviation engineering and planning services to air carrier airports, general aviation airports and military installations.

PLANNING

- Airport layout plans
- Geographic information systems
- Master plans
- Part 77 studies
- Sign plans
- Site development plans
- Terminal planning

ENVIRONMENTAL

- Environmental assessments

DESIGN

- Airside
 - Aprons
 - Apron lighting
 - Airfield lighting
 - Drainage
 - Guidance signs
 - Heliports
 - Navigation aids
 - Runways
 - Taxiways
- Landside
 - Access roads/parking
 - Fueling facilities
 - Hangars
 - Sanitary sewer, water and storm sewer
 - Security fencing/gates
 - SRE buildings
 - Terminals

CONSTRUCTION

- The same Ulteig professionals who help you plan and design your airport will see the projects through to completion.
- Construction administration
 - Construction observation
 - Construction surveying
 - Project closeout

Our team includes engineers and planners who provide demonstrated abilities in effective solutions by drawing on each others' strengths. We partner with our clients to leverage their current facilities and future capital improvements to the greatest possible advantage for the communities they serve.
